                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This CDS has been cloned incl. stopcodon.

The CDS has been inserted into pDONR201 via a BP Clonase(TM)

reaction. Additional sequence has been added in front of the start
codon: att. AAAAAA GCA GGC TCC ACC (ATG).

The stopcodon is followed by the 3' att site:

(stop)GACCCAGCTTTCTT. att Compared to the reference sequence
NM 001834 ($132483393) we found AA exchange(s) at position (first

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TITLE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          COMMENT
                                                                             Circle, Palo Alto, CA 94303, USA

This CDS clone is a part of a collection of human full length
expression clones generated by BD Biosciences Clontech and the
expression clones generated by BD Biosciences Clontech and the
larvard Institute of Proteomics. Bach CDS has been cloned in two
forms: with and without stop-codon (to allow fusion with C-terminal
tag). The CDS has been directionally cloned using BD In-Fusion (TM)
cloning system between the Sall school and Hindill sites of the pDNR-DUAL
vector. Additional sequences in the clone: 'ACC' after Sall site
and before 'ATG' to provide Kozak consensus sequence; 'GG' after
last codon and before Hindill site to maintain reading frame.
Clone distribution: http://bioinfo.clontech.com/orfclones.

Pharmacology, Harvard Institute of Proteomics, 320 Charles St.,
This CDS clone is a part of a collection of human full-length
expression clones generated by Harvard Institute of Proteomics.
This ORF clone has been cloned with normalized stop-codon. The CDS
This Der clone has been cloned with normalized stop-codon. The CDS
has been directionally cloned using BD In-Pusion(TM) cloning system
between the Sall and HindIII sites of the pDNR-Dual vector.
Additional sequences in the clone: "ACC" after Sall site and
before 'ATG' to provide Kozak consensus sequence. Each clone is

This ORF clone has been cloned without stop-codon (to allow fusion with C-terminal tag). The CDS has been directionally cloned using BD In-Fusion(TM) cloning system between the Sall and HindIII sites of the pDNR-Dual vector. Additional sequences in the clone: 'ACC' after last codon and before HindIII site to maintain reading frame. Each clone is clonally isolated and full-length sequence-verified.

Circle, Palo Alto, CA 94303, USA

This CDS clone is a part of a collection of human full length
expression clones generated by BD Biosciences Clontech and the
Harvard Institute of Proteomics. Each CDS has been cloned in two
forms: with and without stop-codon (to allow fusion with C-terminal
tag). The CDS has been directionally cloned using BD In-Pusion(TM)
cloning system between the Sall and Hindill sites of the pDNR-DUAL
vector. Additional sequences in the clone: 'ACC' after Sall site
and before Hindill site to maintain reading frame.
Clone distribution: http://bioinfo.clontech.com/orfclones.

```
The invention relates to methods for predicting toxic effects of compounds or the progression of these toxic effects by determining the compounds or the progression of these toxic effects by determining the compound comparing these to gene expression in unexposed tissues or toxin and comparing these to gene expression in unexposed tissues or calls. Also included are methods of predicting at least one toxic effect of a compound or progression in unexposed to the compound or progression in a tissue or call sample exposed to the compound of two or expression in a tissue or call sample exposed to the compound of two or more genes listed in the specification, where differential expression of the genes is indicative of at least one toxic effect or progression. The method can also be used to identify an agent which modulates the toxic response and predict callular pathways that a compound modulates in a cell. The methods utilise a set of at least two probes (on a solid support in kit form), where each of the probes comprises a sequence that support in kit form), where each of the probes comprises a sequence that support in why pridises to a gene listed in the specification, a computer system comprising a database containing information identifying the expression level in a tissue or call sample exposed to a hepatotoxin of a set of genes comprising at least two genes listed in the specification, and a user interface to view the information used to present information identifying the expression level in a tissue or call of at least one gene listed in the specification. The method is useful for elucidating global changes in gene expression and for identifying toxicity markers in drug screening and toxicity assays. The genes and
                                                                                                                                                                                                                                                                Rat sequence differentially expressed in response to a hepatotoxin #1407.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Predicting toxic effects of compounds or the progression of these toxic effects by determining the changes in gene expression in tissues or cells exposed to the toxin and comparing these to gene expression in unexposed tissues or cells.

gene expression information may be used as diagnostic markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound or agent. Hepatotoxicity is characterised by centrilobular necrosis and steatosis. The present sequence is an expressed sequence tag (EST) or cDNA derived from a gene which is differentially expressed in response to a hepatotoxic agent
                                                                                                                                                                                    158

The present invention relates to a method for predicting a toxic effect

of a compound. The method comprises preparing a gene expression profile

of a tissue or cell sample exposed to the compound, and comparing the

can expression profile to a database comprising SEQ ID 1-4925, where

differential expression of the gene indicates at least one toxic effect.

The method is useful for predicting at least one toxic effect of a compound, pendicting hepatocoxicity or the progression of a toxic effect of a compound, identifying an agent that modulates the onset or progression of a toxic response, predicting the cellular pathways that a compound modulates in a cell, and identifying an agent that modulates at cases one activity of a protein. The method and compositions of the present invention using a database of genes having liver toxin-induced differential expression, are useful in identifying toxicity markers in liver tissues or cells for drug screening and toxicity markers in sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed case toxic int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          218
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180

effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Toxic effect; gene expression profile; renal toxicity; toxicity marker; database; drug screening; toxicity assay; rat; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic
                                                                             toxic effect; gene expression profile; hepatotoxicity; diagnostic marker; toxicity marker; toxicity progression; drug screening; primary rat hepatocyte toxicity modelling; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Determining if a compound induces a toxic effect on a tissue or cell, for identifying hepatotoxic compounds, comprises comparing a gene expression profile of a tissue or cell sample to a database of Tox mean and non-Tox

The invention relates to methods of predicting at least one toxic effect (or toxicity progression or the mechanism of toxicity) of a compound. The methods involve detecting the level of expression of at least one of a set of 680 genes ADW21622-ADW22301 or at least one of a set of 17 genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Predicting toxicity of compounds, useful in development of safe drugs, by measuring the differential expression of specific genes in cells exposed to test compounds.

                                                                                                                                                                  8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel method of predicting at least one toxic effect of a compound. The method comprises a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising at least part of the data or information given in the specification. The methods are useful for predicting at least one toxic effect of a compound, predicting the progression of a toxic effect of a compound, predicting the renal coxicity of a compound, or identifying toxicity markers in tissues or cells exposed to known renal toxin. The genes are useful as toxicity markers in drug screening and toxicity assays, in monitoring disease or physiological states, or disease progression. This polymucleotide represents a rat DNA sequence relating to the toxic effect database described in the specification. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the World Intellectual Property

confidential ADW22362, ADW22414 and ADW22481-ADW22483) in a tissue or cell exposed to the compound, and determining whether the gene is differentially expressed compared with a control tissue or cell.

Differentiall expression of the gene in the presence of the compound is indicative of a toxicity. The toxic effect, of toxicity progression or of a specific mechanism of toxicity. The toxic effect, protein adduct formation or fatty.

CC mechanism of toxicity. The toxic effect is especially hepatoroxicity, particularly hepatotis, liver necrosis, protein adduct formation or fatty.

CC liver. The invention also relates to sets of primers and probes specific or at least two genes selected from ADW21622-ADW22301; solid supports (e.g., DNA chips) and kies containing the probes; and a database containing DNA sequence information and expression information for at least two of the 680 genes from hepatotoxin-exposed tissues. The invention is based on the determination of global changes in gene expression in tissues or cells exposed to known toxins, particularly mediated by various classes of compounds. Such compounds in gene expression can be characteristic of different mechanisms of hepatotoxicity mediated by various classes of compounds. Such compounds which cause an accumulation of fat in the liver; and include direct acting compounds which cause damage to macromolecules, especially proteins and lipids by directly interacting with them, steatotic compounds which cause an accumulation of fat in the liver; and toxicology screening for predicting the toxic effects (especially compounds which represent specifically claimed hepatotoxicity marker genes of rat origin whose expression is altered on exposure to hepatotoxins.

XX Sequences ADW21622-ADW22301 represent specifically or other;

The invention relates to a method of predicting (the progression of) a toxic effect of a compound by preparing a gene expression profile of a toxic effect of a compound by preparing a gene expression profile to a database, or detecting the level of gene (s) gene expression in a tissue or cell sample exposed to the compound, where differential gene expression compared to a control indicates a toxic differential gene expression. The method is useful for predicting (the progression of) at least one toxic effect of a compound. The genes are useful as toxicity markers in drug screening and toxicity assays. The progression of) at least one toxic effect of a compound. The genes are useful for predicting the likelihood that a compound or test agent will induce various specific kidney pathologies, such as nephritis, capent will induce various specific kidney pathologies, such as nephritis, capent will induce various specific kidney pathologies, such as nephritis, capent will induce various specific kidney pathologies, such as nephritis, capent will induce various specific capent injury, or focal segmental glomerulosclerosis. The methods are useful for determining the similarity of a toxic response to one or more individual compounds and for predicting or modelling the potential cellular pathways influenced, induced or modelling the progression of renal disease states, for identifying genes that show promise as new drug targets and for screening known and newly designed drugs. This sequence corresponds to a gene marker used in the method of the invention. (Note: The sequence data for this patent did not form the drug target and for screening known and newly designed through the progression, that was obtained in electronic form part of the printed specification, but was obtained in electronic form part of the printed specification, but was obtained in electronic form part of the printed specification, but was obtained electronic form part of the progression of the toxic response of a gene marker used in the form will and Predicting (the progression of) a toxic effect of a compound, for monitoring the progression of renal disease states, comprises preparing a gene expression profile of a kidney tissue or cell sample exposed to the marker; 687 ds; toxic effect; gene expression profile; kidney tissue; differential gene expression; toxicity progression; toxicity drug screening; toxicity assay; kidney pathology; nephritis; kidney necrosis; glomerular injury; tubular injury; focal segmental glomerulosclerosis. 639 AGAGCAGCAAGCAATGTAAAGACGTGTCCCGCCTGCGCTCGGTGCTCAT Higgs B; Castle A, Renal toxin progression gene marker #1228. The invention relates to a method of predicting at least one toxic effect of a compound by obtaining a gene expression profile of a tissue or cell sample exposed to the compound and comparing the gene expression profile to a database of toxicity prediction genes which are differentially expressed on exposure to known toxins. The tissue or cell sample is preferably derived from heart tissue, and the predicted toxic effect is cachycardia, myocardial ischemia, and the predicted toxic effect is cachycardia, myocardial ischemia, angula, hyperension, hyperension, dyspnea, cardiogenic shock or other specific heart pathologies. The invention is based on the elucidation of global changes in gene expression in tissues or cells exposed to known toxins, particularly cardiotoxins, and the identification of individual genes (toxicity cardiotoxins, and the identification of individual genes (toxicity of a cardiotoxins, and the identification of individual genes (toxicity of a compound's toxic effects, for predicting the cardiotoxicity of a compound, for identifying an agent that modulates the progression of a toxic response, and for predicting which cellular progression of a toxic response, and for predicting which cellular predicting the toxic effects who hybridization probes specific for toxicity predicting the toxic effects who hybridization probes specific for toxicity predicting the toxic effects (sepecially cardiotoxic marker compounds such as pharmaceutical agents or environmental pollutants. Sequences ADV39135-ADV41830 represent cardiotoxicity marker compounds such as pharmaceutical agents or environmental pollutants. Sequences ADV39135-ADV41830 represent cardiotoxicity marker compounds such as pharmaceutical agents or environmental pollutants. Sequences ADV39135-ADV41830 represent cardiotoxicity marker compounds such as pharmaceutical agents of the sequence data for this patent distoric for meat of the printed specification, but was obtained in electronic form part of the printed specific at least tone cardiotoxian, Predicting a toxic effect of a compound by obtaining a gene expression profile of a tissue or cell sample exposed to the compound and comparing the gene expression profile to a database comprising all of the data given in the specification. The invention relates to detecting (M1) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (Gs) identified by DNA chip analysis as given in the specification, and comparing the expression level to an expression level in an unactivated GC, where differential expression of Gs is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent that alters the modulating GCA or an inflammation (especially chronic) in a tissue, an altergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the gene expression profile; (3) detecting (M4) an inflammation (especially chronic) in a pathogen or sterile inflammatory disease, by detecting the level of expression of the gene is indicative of inflammation; (4) treating c expression of the desease, by detecting the level of expression of the gene is indicative of inflammation; (4) treating c expression of the gene is indicative of inflammation; (4) treating c response in a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having inflammation with an employed. Expression of a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having inflammation with an agent that modulates the expression of gene(8) from Gs in the tissue. M1 is useful for screening an agent capable of modulating GA preferably in an
                                                                                                              519 AGCCAGATGCTGATACCATTGGCTATGTGGCATCGGAAGAGGCTTTTGTGAAAGAATCCA 578
                                                                           Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and drug toxicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; 88; granulocytic cell; DNA chip; bacterial infection; viral infection; parasitic infection; protozoal infection; tungal infection; persiste inflammatory disease; psoriasis; rheumatoid arthritis; glomerulonephritis; asthma; thrombosis; cardiac reperfusion injury; renal reperfusion injury; ANDS; adult respiratory stress syndrome; inflammatory bowel disease; crohm; s disease; ulcerative colitis; periodontal disease;

inflammation in a tissue; M4 is useful for detecting an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease (e.g. psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis, cardiac reperfusion injury, renal reperfusion injury, ARDS, adult respiratory distress syndrome, inflammatory bowel disease, Crohn's disease, ulcerative colitis, periodontal disease; also bacterial infection, viral infection, parasitic infection, protozoal infection, fungal infection, parasitic infection, protozoal infection, fungal infection and MS is useful for treating one of the above conditions. The present sequence represents a gene differentially expressed in granulocytes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  629
                                                                                                                                                                                                                                                                       The invention relates to an array for screening a patient for resistance to docetaxel comprising complementary nucleic acid probes attached to a solid surface for at least 10 of the nucleic acids chosen from 91 fully defined sequences as given in the specification. The array is useful for screening a patient for resistance to docetaxel. The array is also useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              269

This invention describes a novel method of predicting or determining whether a mammal will respond or is responding to an anti-cancer agent that modulates cyclin-dependent kinase (cdk) activity. The method comprises measuring the level of one or more biomarkers selected from comprises measuring the level of one or more biomarkers selected from CC 2774 biomarkers given in the specification (nucleotide sequence SEQ ID comprise) is especially preferred). The method of the invention is utilized in a kit for determining or predicting whether comparison is utilized in a kit for determining or predicting whether cutilizing individualized genetic profiles for treating diseases and ciscorders based on patient's response and molecular level, specialized microarrays comprising the biomarkers described, antibodies directed ciscorders and a call culture model to identify biomarkers. The cdk modulator is preferably N-2-(CC against the biomarkers and a call culture model to identify biomarkers. The cdk modulator is preferably N-2-(CC arcaric acid salt, Note: The sequence data for this patent did not form to tartaric acid salt, Note: The sequence data for this patent did not form directly from WIPO at ftp.wipo.int/pub/published_pot_sequences. This comparison.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TCGGGGCACCTGCCGCCAGCCAGGTGGCCTCTGCGCAGCCCGGAGTCGCGAGCGGGGGTG 120

oxazoly]]methyl]thio]-2-thiazolyl-4-piperidine carboxamide, 0.5-L-tartaric acid salt. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published pct sequences. This sequence encodes a biomarker used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; ss; gene; secreted protein; immune deficiency; viral infection; bacterial infection; fungal infection; autoimmune disorder; burn; theumatoid arthritis; multiple sclerosis; autoimmune thyroiditis; diabetes; allergy; asthma; neurodegenerative disease; Crohn's disease; Alzheimer's disease; Parkinson's disease; liver fibrosis; tumour; cosquitation disorder; haemophilia; inflammatory disorder; ulcer; tissue regeneration; wound healing; haematopolesis; myeloid deficiency; lymphoid cell deficiency.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes a novel method of predicting or determining whether a mammal will respond or is responding to an anti-cancer agent that modulates cyclin-dependent kinase (cdk) activity. The method comprises measuring the level of one or more biomarkers selected from 2774 biomarkers given in the specification (nucleotide sequence SEQ ID NO:1246 (Genbank EST W28729) is especifically preferred). The method of the invention is utilized in a kit for determining or predicting whether patient would be susceptible or resistant to treatment by an agent combinating of activity. The invention also describes a method for utilizing individualized genetic profiles for treating diseases and disorders based on patient's response and molecular level, specialized militaring individualized genetic profiles for treating diseases and disorders based on patient's response and molecular level, specialized against the biomarkers and a cell culture model to identify biomarkers. The cdk modulator is preferably N-5-[[5-(1,1-Dimethylethyl)]-2-
                                                                                                                                                                                                                                                                         420
                                                                                                                                                                                                                                                                                                                                                                      480
                                                                                                                                                                                                                                                                                                                       629

                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to 625 polynucleotides which have been derived from a variety of human tissue sources and which encode novel secreted proteins, their complements and sequences that hybridse to them. Also included are a vector comprising the polynucleotide, a host cell transformed with the vector, the proteins encoded by the polynucleotides, an entibodies that bind to the proteins encoded by the polynucleotides of the proteins or the expression of identification of modulators of the proteins or the expression of this polynucleotide. The polynucleotides can be used as probes for the identification and isolation of full length contains and genomic DNA. The polynucleotides and proteins can also be used as nutritional supplements. The protein is useful in the treatment of various immune deficiencies and disorders such as viral infections, bacterial infections, fungal infections, autoimmune disorders (e.g. theumatorial arthritis, multiple sclerosis, autoimmune thyroiditis and disease) and allergic reactions and conditions (e.g. asthma). They are also useful for tissue regeneration, for wound healing can die the treatment of burns, inclaions and ulcers. The proteins are also useful for regulating haematopoiesis, for treating myeloid or lymphoid cell deficiencies. The present sequence is one of the 625 cDNA lymphoid cell deficiencies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       δ
```

The invention relates to 625 polynucleotides which have been derived from a variety of human tissue sources and which encode novel secreted proteins, their complements and sequences that hybridise to them. Also included are a vector comprising the polynucleotide, a host cell transformed with the vector, the proteins encoded by the polynucleotide antibodies that bind to the proteins and identification of modulators of the proteins or the expression of the polynucleotide. The polynucleotide can be used as probes for the identification and isolation of full length cDNA and genomic DNA. The polynucleotides and proteins can also be used as nutritional supplements. The protein is useful in the treatment of various immune deficiencies and disorders such as viral infections, bacterial infections, fungal infections, autoimmune disorders (e.g. 493 355 594 GGAATGGCGGGAGAAGGCCAAGAAGGACCTGGAGGAGTGGAACCAGCGCCAGAGTGAACA 535 475 433 Six hundred and twenty five polynucleotides derived from a variety of human tissue sources which encode secreted proteins, useful for treating immune deficiencies and disorders such as autoimmune disorders.             diabetes) and allergic reactions and conditions (e.g. asthma). They are also useful for treating neurodegenerative diseases (e.g. Alzheimer's disease, Parkinson's disease), liver fibrosis, coagulation disorders (e.g. haemophilia), inflammatory disorders (e.g. Crohn's disease) and tumours. They are also useful for tissue regeneration, for wound healing and in the treatment of burns, incisions and ulcers. The proteins are also useful for regulating heamatopoicsis, for treating mysloid or lymphoid cell deficiencies. The present sequence is one of the 625 cDNA

The invention relates to an isolated polynucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH5081, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polyneptide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences are asfall in diagnostics as expressed sequence tags (BST) for identifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide genesors also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antibodies specific for it. The present sequence is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly approach.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           103
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            163
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             283
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               343
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              456
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             403
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            156

consists of a mixture of individually tagged normalized libraries constructed from 8, 12 and 18-day embryo. The tag is a string of 3-5 nucleotides present between the Not I site and the oligo-dT track which allows identification of the library of origin of a clone within
